

# THE EMERGENCY OXYGEN KIT

First in First Aid

**Contains:**

- **BAG Resuscitator**
- **Adult therapy mask (single use)**
- **an 8 & 15L flow metre regulator**

This provides the first aider with an easy to use oxygen unit for therapy and Bag valve mask resuscitation.

### The BAG Resuscitator

The BAG Resuscitator is an integral part of this unit and its superior temperature versatility, space saving configuration and oxygen reservoir bag make it the sensible choice.

Features of the BAG Resuscitator:

- Adjustable hook-and-loop handle for all hand sizes and maximum comfort.
- Performs well in extreme temperatures -18° to 50° c.
- Disposable Face Mask features an ultra-soft airtight cushion seal.
- A 3 metre connecting tube provides easy access to the oxygen source.
- Highly visible in low-light conditions.
- Collapsible body and reservoir.
- PEEP valve.

Oxygen Kit Special Features:

- The special aluminium frame incorporated into the Emergency Oxygen Kit has feet that provide a stable, flat base, which holds the body of the kit above contaminants when it is placed on the ground. They also prevent the Oxygen Kit from rolling over on its side, keeping it stable and clean.
- The one-zipper, easy-access regulator compartment is fully padded with closed-cell foam to protect the cylinder and the gauges on the sides and ends.

Dimensions: 21 1/2" L x 4 1/2" W x 8 1/4" H
