

# ST JOHN LARGE TRAUMA MANAGEMENT PACK

First in First Aid

The trauma packs are specifically designed to provide initial management to a seriously injured worker.

The packs are used by heavy and high risk industries to provide the best range of materials and equipment available to a first aid specialist on site.

### The Benefits of Trauma Packs

All necessary equipment is in one pack minimising the risk of items being forgotten and allowing the first aider to pick it up and run to the scene of a major trauma incident.

The back pack facility allows a first aider hands-free operation.

A comprehensive range of equipment is readily available and can be seen at a glance.

### Trauma Pack Capabilities

- Establish and maintain an airway.
- Provide high concentration oxygen.
- Ventilate a non-breathing casualty using high concentration oxygen.
- Control profuse life threatening bleeding.
- Immobilise the neck.
- Immobilise limb fractures.
- Manage large burns.
